The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The preamble of the claims states that only the lift apparatus is being claimed, the positive limitation of the engine suggests that a combination of the lift apparatus is being claimed, thus rendering the claim indefinite as it is unclear what is boundary of the invention being sought.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2 and 7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Osborn.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-6,8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Osborn. To make the opening of Osborn as a circular opening, would have been an obvious mechanical expediency is such a construction is desired, and to provide a similar shaped beam at the border of the opening with such a beam held by support structure members, as set forth in claim 6, would have been to one of ordinary skill in the art as such constructions are conventional to provide a reinforcing support to the edge of an opening. To accommodate a conventional engine through the opening of Osborn, as other articles, would have been an obvious mechanical expediency.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Osborn in view of Hiyama. Osborn shows the claimed lift with the exception of the filler pates. Hiyama shows filler plates at 150 for adjusting the size of an opening. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the opening of Osborn with filler plates, as taught by Hiyama, to enable adjustment of the size of the opening.
